

Our Family of Nano-Receiver Notebook Mice

For Business on the Go

[LEARN MORE >](#)

The tiny nano-receiver is so small, it stays in your notebook. So you're always ready to go-go-go.

Hello <First name>,

The Logitech family of mice with nano-receivers features a receiver so small, it stays in your notebook. Just plug it into your USB port once and forget about it. No more hassles. No more lost receivers. No more plugging and unplugging the receiver every time you have to move. Simply grab your mouse and go.

Plus, you choose a mouse that has that features like revolutionary hyper-fast scrolling, extra-long battery life, advanced 2.4 GHz cordless technology, or a clip-and-go dock, so you'll always be ready to go-go-go!

Happy travels!
